✓ Finished 2.9K | 2.1s

TC_CD_001 Title: Verify consultant dashboard displays inpatient data Preconditions: User is logged in with valid access Steps:

1. Navigate to consultant dashboard
2. Verify inpatient data is displayed correctly
3. Check for relevant visualizations
4. Confirm data is up-to-date Expected Result: Relevant data and visualizations are displayed correctly without delay

TC_CD_002 Title: Test consultant dashboard with invalid access Preconditions: User is logged in with invalid access Steps:

1. Navigate to consultant dashboard
2. Verify error message is displayed
3. Check for restricted access
4. Confirm inability to view inpatient data Expected Result: Error message is displayed and user is restricted from viewing inpatient data

TC_CD_003 Title: Verify consultant dashboard handles large inpatient data Preconditions: User is logged in with valid access and large inpatient data Steps:

1. Navigate to consultant dashboard
2. Verify data is displayed correctly
3. Check for performance issues

TC_CD_004 Title: Test consultant dashboard with expired session Preconditions: User is logged in with expired session Steps:

1. Navigate to consultant dashboard
2. Verify session timeout error message
3. Check for automatic logout
4. Confirm inability to view inpatient data Expected Result: Session timeout error message is displayed and user is automatically logged out

TC_CD_005 Title: Verify consultant dashboard handles missing inpatient data Preconditions: User is logged in with valid access and missing inpatient data Steps:

1. Navigate to consultant dashboard
2. Verify error message is displayed
3. Check for placeholder or default values
4. Confirm inability to view inpatient data Expected Result: Error message is displayed and user is unable to view inpatient data

From POSTMAN: Test case generated with respective Langflow API in POSTMAN

The screenshot shows the Postman interface with a POST request to `http://localhost:7860/api/v1/run/d43500e8-64f0-4ec9-affa-a9d2fc827e6b?stream=false`. The request headers include `Content-Length`, `Host`, `User-Agent`, `Accept`, `Accept-Encoding`, `Connection`, `Content-Type`, and `x-api-key`. The response status is `200 OK` with a body of JSON data.
